

January 2020 – Ice jam flooding from Silver Creek

- The surface flooding is due to an ice jam where Rinay Rd crosses Silver Creek. Its frozen at the culvert and water is being diverted from the culvert crossing into the road ditches and is flowing east along the road ditch to Montana Ave. Most of the water is contained in the ditches, but there are some low spots closer to Montana Ave that are seeing some pooling.
- With Silver Creek flowing pretty good this winter, we should expect to see some problems with ice jamming and flooding along Silver Creek through the winter.
